CAREER FOCUS

- Staff / Principal SDET or Quality Platform Engineer roles
- Ownership of automation platforms and quality strategy at scale
- Engineering-driven SaaS organizations with enterprise reach and multi-tenant architecture

TECHNICAL SKILLS

Java | Kotlin | JavaScript | Python | Playwright | Selenium | Cypress | RestAssured | K6 | Testkube | Jenkins | Docker | Kubernetes | Allure | ReportPortal | Selenoid | AWS | Azure | GCP | Crossplane | Spring Boot | Node.js | GraphQL | Microservices | Infrastructure as Code | Contract Testing | API Testing | Site Reliability Engineering

Professional Summary

ENTERPRISE CLOUD-NATIVE QA

Visionary Staff SDET with nearly a decade (**9.7 years**) of experience spearheading quality engineering and organizational transformation for enterprise cloud-native SaaS platforms. A proven technical leader in architecting scalable, cloud-agnostic QA ecosystems across AWS, GCP, and Azure, driving "shift-left" practices that accelerate delivery, improve release confidence, and reduce operational costs.

Expert in building resilient continuous testing pipelines for complex microservices using modern stacks (Java, Kotlin, TS/JS, Playwright). Currently pioneering the future of QA through AI-assisted engineering—leveraging LLMs, Claude, Cursor, and MCP to build self-healing tests, automate regression analysis, and multiply developer productivity. Recognized as a strategic partner to cross-functional teams, combining deep platform expertise with AI-driven innovation to embed uncompromising quality into the software development lifecycle.

Executive Highlights

IMPACT & ARCHITECTURE

SCOPE & IMPACT

- Owned quality strategy and continuous testing practices for enterprise SaaS platforms deployed across multiple regions (US, UK).
- Built robust AI-powered regression analysis solution processing 4,000+ test cases, automatically diagnosing failures, querying Grafana logs via MCP, creating Linear tickets, analyzing GitLab commits to trace defect origins, and identifying genuine issues with **85%** accuracy.
- Created extensive test generation toolkit using Cursor and Claude AI across polyglot microservices (Java, Node.js, Python, Go), integrated into deployment pipelines and reducing test authoring time by **80%**.
- Enabled rapid enterprise growth by minimizing test effort through reusable automation platforms, avoiding linear QA scaling and reducing test creation effort by **70%**.
- Built shared QA platforms consumed by multiple teams and services with **99.5%** uptime and reliability.

ARCHITECTURE & DESIGN

- Designed scalable automation architectures spanning frontend, backend, contract testing, API testing, and performance testing with test-driven development principles.
- Built code-aware test setups aligned with service internals, improving failure diagnosis by **60%** and reducing flakiness by **50%**.
- Designed CI/CD quality gates aligned with service criticality and deployment risk, improving release management efficiency by **35%**.
- Led in-cluster test execution models using Kubernetes and Testkube with comprehensive test observability.
- Optimized test depth vs execution cost to support SaaS growth efficiently, reducing cloud costs by **12%**.

Professional Journey

RECENT LEADERSHIP

Staff SDET • AlphaSense

March 2025 – Present

- Architected enterprise QA Platform MCP consolidating daily-driver MCP servers (GitLab, Linear, Slack, Allure, Testkube), exposing **350+ tools** and **150+ skills** to autonomously execute end-to-end QA actions and AI assistance.
- Engineered an autonomous Self-Healing pipeline running on automated schedules to continuously detect persistent test failures, auto-heal broken tests, raise GitLab MRs, and request Slack peer reviews for **100%** robust test coverage.
- Built an AI-powered Auto-Review bot with agentic skills that automatically inspects raised MRs, validates code quality, identifies logical gaps and bugs, and enforces engineering best practices for seamless peer review.
- Developed an intelligent CI/CD Troubleshooting Agent for hard-gated pipeline failures, correlating test history, MR diffs, and integration service health to provide instant diagnostic verdicts and trigger self-healing remediation.
- Designed and rolled out a custom Playwright agentic capabilities used org-wide to generate base automation scripts in minutes, reducing test bootstrap time by

CERTIFICATIONS

Selenium Professional Certification
VSkills • 2019

Cloud-Native Quality Engineering Specialization
AlphaSense • 2024
Testkube, Crossplane IaC, SRE Observability

CORE COMPETENCIES

- Autonomous Testing & Agentic MCP Tooling
- Multi-Cloud Infrastructure (AWS, Azure, GCP)
- Contract & Microservices API Testing
- Shift-Left & Test-Driven Development (TDD)
- SRE Reliability & Test Observability

Professional Journey (Continued) — EXPERIENCE HISTORY

Senior Automation QA • AlphaSense — Jan 2022 – Sept 2023

- Led a team of 3 QA engineers and managed sprint planning and execution following Agile and Scrum methodologies.
- Built scalable automation frameworks using Java, JavaScript, Cypress, K6, and Selenide with test-driven development principles.
- Integrated post-deployment automation using Spinnaker for continuous testing and release management.
- Implemented performance testing strategies for microservices and SQS-based systems, identifying bottlenecks and improving throughput by **35%**.
- Improved system reliability through proactive automation and performance insights, reducing production incidents by **30%**.

Automation QA • AlphaSense — Mar 2020 – Dec 2021

- Implemented frontend automation using Selenium (Java) and Selenide (Kotlin) with comprehensive API testing and contract testing coverage.
- Built backend API automation using Kotlin and RestAssured following shift-left testing practices.
- Automated GraphQL APIs and maintained large-scale regression suites (4K+ test cases) with **95%** pass rate.
- Integrated Allure, ReportPortal, and Selenoid Grid for test observability, reporting, and execution scalability across multi-tenant architecture.

QA Automation / Associate QA • Accenture — Jan 2017 – Mar 2020

- Automated 100+ healthcare web applications across enterprise client engagements following software quality assurance best practices.
- Executed E2E, regression, smoke, UAT, and UI testing within complete SDLC lifecycle.
- Worked on US government projects with strict compliance and quality standards, achieving **98%** defect detection rate.
- Built strong foundations in enterprise QA processes, documentation, and quality engineering methodologies.

Key Platforms & Innovation — ARCHITECTURE & TOOLING

- **AI-Driven Regression Platform:** Analyzes **4,000+ test cases** via MCP tooling (Grafana, Linear, GitLab) with **85% precision**.
- **Playwright MCP Server:** Autonomous test generation, cutting bootstrap time from days to minutes (**90% improvement**).
- **Auto-SDK Pipelines:** Swagger change detection auto-updating polyglot SDKs with **85% maintenance reduction**.
- **AI Test Generation Framework:** Multi-service automation using Cursor/Claude, reducing authoring effort by **80%**.
- **Backend E2E Generators:** Complete API surface contract testing, reducing manual effort by **70-80%**.
- **Cloud-Agnostic Execution:** Crossplane and Infrastructure as Code across **AWS, Azure, and GCP** with **99.5% uptime**.

Education — ACADEMIC CREDENTIALS

B.Tech – Mechanical Engineering	JECRC, Jaipur • 2012 – 2016 • 68.1%
12th – Science (Math & Physics)	RBSE • 2010 – 2011 • 75%
10th	RBSE • 2008 – 2009 • 75%
