PROFESSIONAL SUMMARY

ENTERPRISE CLOUD-NATIVE QA • 9.7 YEARS

Visionary Staff SDET with nearly a decade (**9.7 years**) of experience spearheading quality engineering and organizational transformation for enterprise cloud-native SaaS platforms. A proven technical leader in architecting scalable, cloud-agnostic QA ecosystems across AWS, GCP, and Azure, driving "shift-left" practices that accelerate delivery, improve release confidence, and reduce operational costs.

Expert in building resilient continuous testing pipelines for complex microservices using modern stacks (Java, Kotlin, TS/JS, Playwright). Currently pioneering the future of QA through AI-assisted engineering—leveraging LLMs, Claude, Cursor, and MCP to build self-healing tests, automate regression analysis, and multiply developer productivity. Recognized as a strategic partner to cross-functional teams, combining deep platform expertise with AI-driven innovation to embed uncompromising quality into the software development lifecycle.

SKILLS & TECHNICAL COMPETENCIES

TECHNOLOGIES & PROCESS METHODOLOGIES

TECHNICAL STACK: Java, Kotlin, JavaScript, Python, Playwright, Selenium, Cypress, RestAssured, K6, Testkube, Jenkins, Docker, Kubernetes, Allure, ReportPortal, Selenoid, AWS, Azure, GCP, Crossplane, Spring Boot, Node.js, GraphQL, Microservices, Infrastructure as Code, Contract Testing, API Testing, Site Reliability Engineering

PROCESS & PRACTICES: Agile, Scrum, Test Strategy, Quality Assurance, CI/CD, DevOps, Test Automation, Performance Testing, Continuous Testing, Test-Driven Development, Quality Engineering, Shift-Left Testing, Release Management, SDLC, Software Quality Assurance, Test Observability

EXECUTIVE HIGHLIGHTS & PLATFORMS

SCOPE, ARCHITECTURE & ENGINEERING INNOVATION

SCOPE & ENTERPRISE IMPACT

- Owned enterprise quality strategy and continuous testing across US & UK regions.
- Built AI-driven regression platform analyzing 4,000+ test cases via MCP tooling (Grafana, Linear, GitLab) with **85%** precision.
- Created test generation framework using Cursor & Claude AI across polyglot microservices, reducing authoring effort by **80%**.
- Deployed Playwright MCP tooling for rapid test generation, reducing test bootstrap time from days to minutes (**90%** improvement).
- Built shared QA platforms consumed org-wide by multiple teams with **99.5%** uptime and enterprise reliability.

ARCHITECTURE & PLATFORM ENGINEERING

- Architected scalable automation spanning frontend, backend, contract testing, and performance engineering with TDD.
- Built code-aware test setups aligned with microservices internals, improving failure diagnosis by **60%** and flakiness by **50%**.
- Backend E2E generators covering near-complete API surfaces with contract testing, reducing manual effort by 70-**80%**.
- Led in-cluster test execution using Kubernetes and Testkube with comprehensive SRE observability and telemetry.
- Cloud-agnostic execution frameworks using Crossplane and IaC across AWS, Azure, and GCP, reducing cloud costs by **12%**.

PROFESSIONAL JOURNEY

FLAGSHIP STAFF SDET ROLE

Staff SDET • AlphaSense — **March 2025 – Present**

- Architected enterprise QA Platform MCP consolidating daily-driver MCP servers (GitLab, Linear, Slack, Allure, Testkube), exposing **350+ tools** and **150+ skills** to autonomously execute end-to-end QA actions and AI assistance.
- Engineered an autonomous Self-Healing pipeline running on automated schedules to continuously detect persistent test failures, auto-heal broken tests, raise GitLab MRs, and request Slack peer reviews for **100%** robust test coverage.
- Built an AI-powered Auto-Review bot with agentic skills that automatically inspects raised MRs, validates code quality, identifies logical gaps and bugs, and enforces engineering best practices for seamless peer review.
- Developed an intelligent CI/CD Troubleshooting Agent for hard-gated pipeline failures, correlating test history, MR diffs, and integration service health to provide instant diagnostic verdicts and trigger self-healing remediation.
- Designed and rolled out a custom Playwright agentic capabiliies used org-wide to generate base automation scripts in minutes, reducing test bootstrap time by **90%**.
- Built backend E2E generators covering full API surfaces with contract testing and API testing capabilities, reducing manual test effort by 70-**80%**.

Team Lead – QA Automation • AlphaSense — Oct 2023 – March 2025

- Automated manual operational workflows using Slack-based automation, reducing response times by **65%** and improving operational efficiency.
- Optimized cloud costs via cron-based cleanup and governance using Infrastructure as Code principles, saving **$1K+** per month (**12%** reduction).
- Integrated cloud resources using Crossplane, enabling cloud-agnostic test execution across AWS, Azure, and GCP with **99.5%** uptime.
- Implemented and enhanced Testkube with in-cluster testing, triggers, and reusable workflows, improving test observability by **50%**.
- Shifted validation to build-level execution, strengthening CI/CD pipelines and reducing late failures by **45%**.
- Designed Jenkins-based continuous testing pipelines focused on early defect detection and fast feedback within SDLC.
- Mentored QA engineers to independently own complex automation systems and cloud tooling, improving team autonomy by **60%**.

Senior Automation QA • AlphaSense — Jan 2022 – Sept 2023

- Led a team of 3 QA engineers and managed sprint planning and execution following Agile and Scrum methodologies.
- Built scalable automation frameworks using Java, JavaScript, Cypress, K6, and Selenide with test-driven development principles.
- Integrated post-deployment automation using Spinnaker for continuous testing and release management.
- Implemented performance testing strategies for microservices and SQS-based systems, identifying bottlenecks and improving throughput by **35%**.
- Improved system reliability through proactive automation and performance insights, reducing production incidents by **30%**.

Automation QA • AlphaSense — Mar 2020 – Dec 2021

- Implemented frontend automation using Selenium (Java) and Selenide (Kotlin) with comprehensive API testing and contract testing coverage.
- Built backend API automation using Kotlin and RestAssured following shift-left testing practices.
- Automated GraphQL APIs and maintained large-scale regression suites (4K+ test cases) with **95%** pass rate.
- Integrated Allure, ReportPortal, and Selenoid Grid for test observability, reporting, and execution scalability across multi-tenant architecture.

QA Automation / Associate QA • Accenture — Jan 2017 – Mar 2020

- Automated 100+ healthcare web applications across enterprise client engagements following software quality assurance best practices.
- Executed E2E, regression, smoke, UAT, and UI testing within complete SDLC lifecycle.
- Worked on US government projects with strict compliance and quality standards, achieving **98%** defect detection rate.
- Built strong foundations in enterprise QA processes, documentation, and quality engineering methodologies.

EDUCATION — ACADEMIC CREDENTIALS

B.Tech – Mechanical Engineering	JECRC, Jaipur • 2012 – 2016 • 68.1%
12th – Science (Math & Physics)	RBSE • 2010 – 2011 • 75%
10th	RBSE • 2008 – 2009 • 75%

HONORS & CERTIFICATIONS — RECOGNITION & CREDENTIALS

AlphaAward — Engineering Impact
AlphaSense
Selective performance stock award recognizing high-impact QA platform delivery

Selenium Professional Certification
VSkills • 2019
Enterprise Web Automation & Continuous Quality Testing
